Output:

Example.txt =
Hello World!

Remaining bytes that can be read: 11
HELLO WORLD!
Remaining bytes that can be read: 0

4)
```java
import java.io.FileInputStream;
import java.io.IOException;

public class FileEx2{
    public static void main (String args[]) throws
                                  IOException {
    FileInputStream fin = new FileInputStream("Example.txt");
    byte[] bytes = new byte[20];
    int i;
    char c;
    i = fin.read(bytes);
    System.out.println("Number of bytes read:"+i);
    System.out.print("Bytes read :");
    for( byte b: bytes) {
        c = (char)b;
        System.out.print(c);
    }
    }
}
```

Output: Example.txt =
                                                Hello World!

Number of bytes read: 13
Bytes read: Hello World!
